

FS1-3	<h1>RADIATOR SUPPORT</h1>
Inspection Criteria	
The upper and lower radiator supports should be fastened with bolts.	
Reason	
Because the radiator supports are not welded, they can be removed easily if damaged, which reduces man hours. Also, the condenser and radiator can be removed by removing the upper or lower radiator support.	
<div><div>Good Example</div><div><div>The upper support is fastened with bolts.</div><div>The side support is fastened with bolts.</div><div>The lower support is fastened with bolts.</div><div>The radiator support is not divided, but fastend to body with bolts.</div></div></div>	<div><div>Poor Example</div><div><div>The upper, lower, and sides of the radiator core support are welded.</div></div></div>
