

Inspection Criteria

The rear inside panel should be supplied as a sub-assembly or individually so that it can be replaced according to the degree of damage.

Reason

When the service parts for the rear inside panel are supplied as a sub-assembly or individually so that it can be replaced according to the degree of damage, only part of the panel needs to be replaced and it is not necessary to take the necessary parts from the assembly, which reduces man-hours and parts cost.

Good Example

The rear inside panel parts are supplied as a single item, sub-assembly, or complete assembly.

Poor Example

The rear inside panel parts are supplied only as a complete assembly.

Only the rear inside panel assembly is supplied.
