

M2-2

AIR CONDITIONER CONDENSER PIPE AND OTHER PIPES

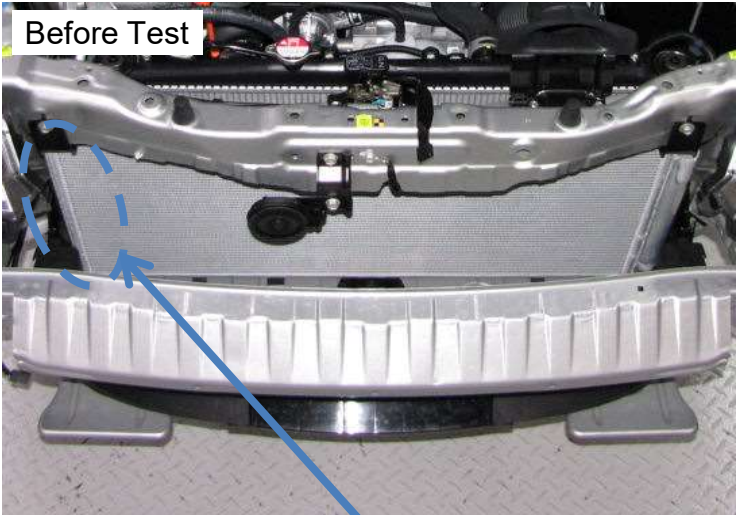

Inspection Criteria

Pipes including the air conditioner condenser pipe should be installed at a position where interference from peripheral parts can be avoided in a collision.

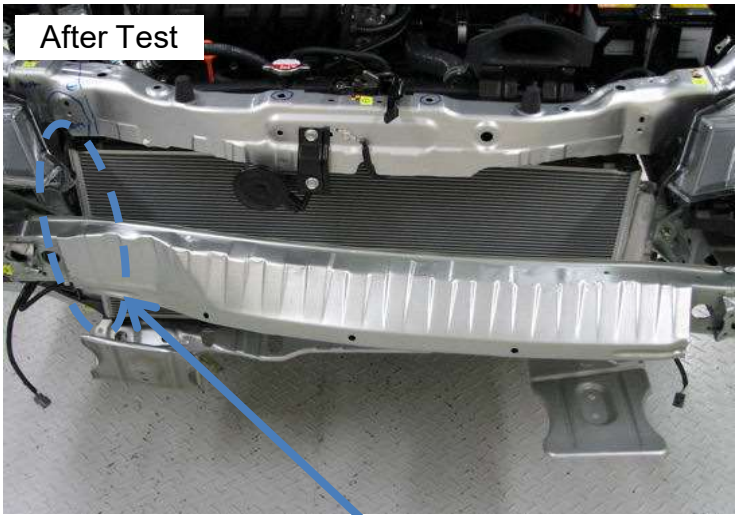

Reason

Pipes including the air conditioner condenser pipe are weak and prone to damage. Installing them at a position where interference from peripheral parts can be avoided helps prevent damage.

Good Example

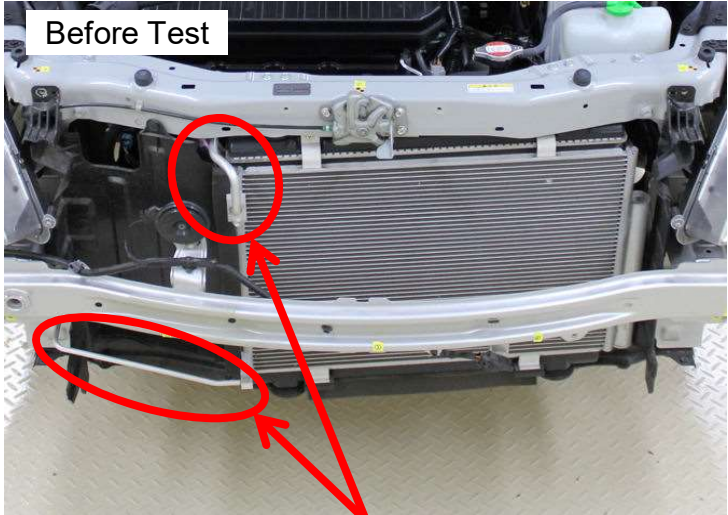

The air conditioner condenser pipe is installed behind the condenser.

Air conditioner condenser pipe was not damaged.

Poor Example

Two air conditioner condenser pipes are installed very close to the bumper reinforcement.

Air conditioner condenser pipe was pushed and damaged by the bumper cover.
