

M2-1

AIR CONDITIONER CONDENSER PIPE AND OTHER PIPES

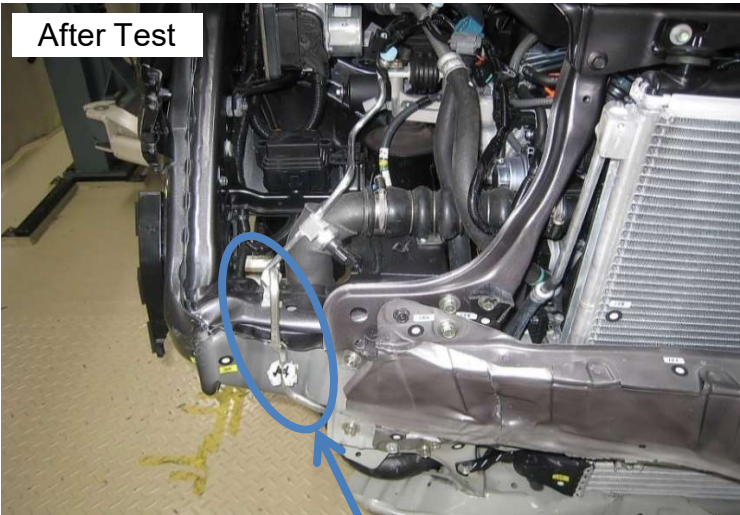

Inspection Criteria

Pipes including the air conditioner condenser pipe should be divided into front and rear sections and each section should be supplied individually.

Reason

When pipes including the air conditioner condenser pipe are divided into front and rear sections, only the damaged side needs to be replaced and removal of the engine and other peripheral parts are eliminated, which reduces the repair cost.

Good Example

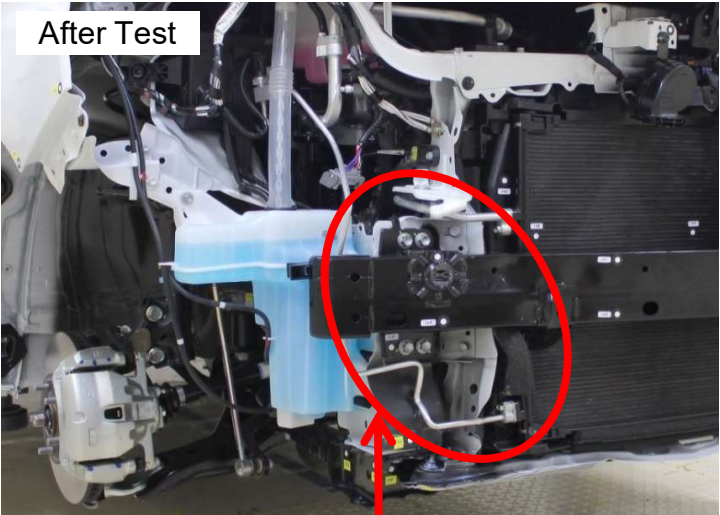

Front section of the pipe was damaged.

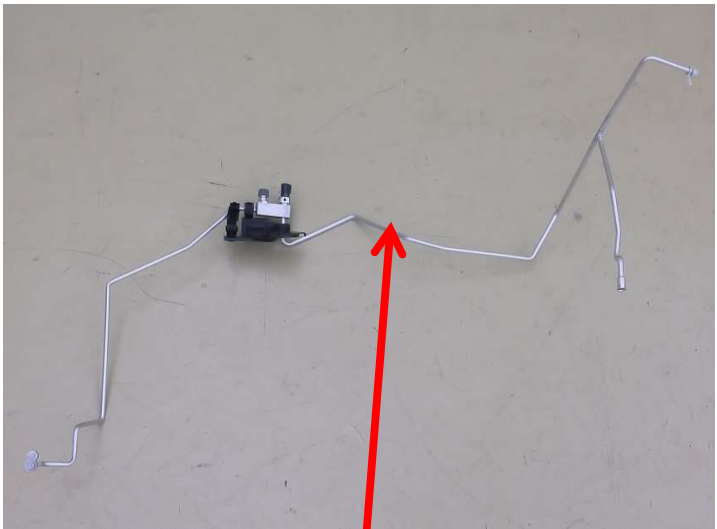

Repair was done just replacing the front pipe.

Poor Example

Front section of the pipe was damaged.

Because the part is in one piece, peripheral parts needed to be removed.
