

Inspection Criteria

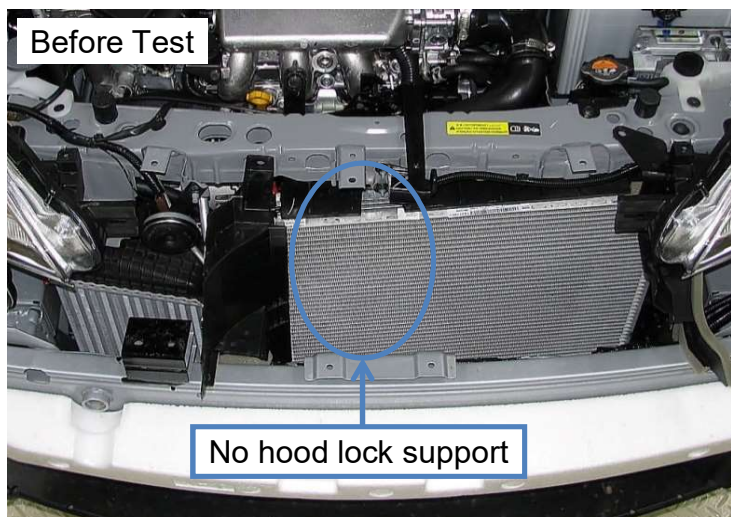

A hood lock support should not be used as it can damage peripheral parts in a collision.

Reason

When a hood lock support is not used, damage to the hood, radiator upper support, condenser, radiator, etc. due to the hood lock support moving rearward is less likely to occur in a collision.

Good Example

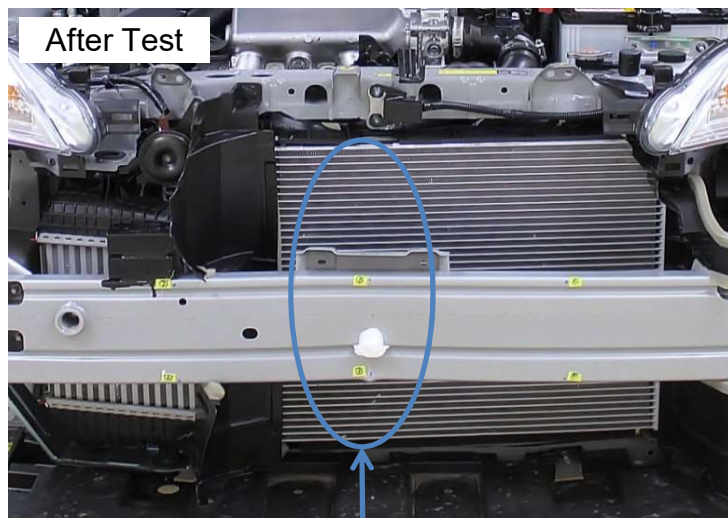

Before Test

No hood lock support

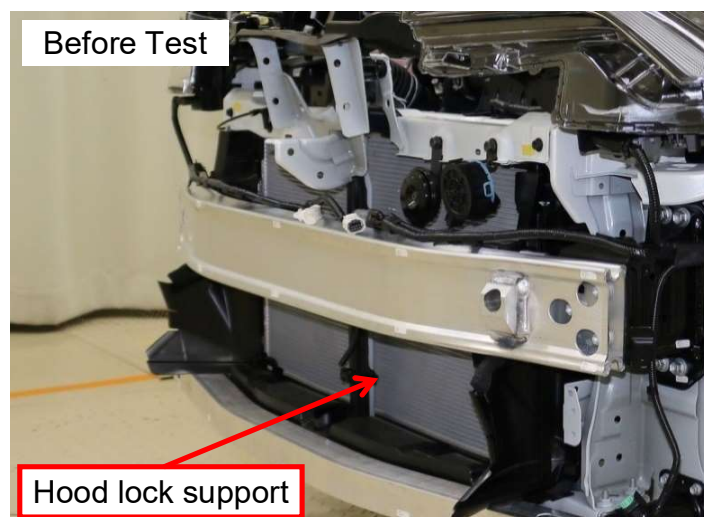

After Test

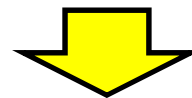

Condenser was not damaged.

Poor Example

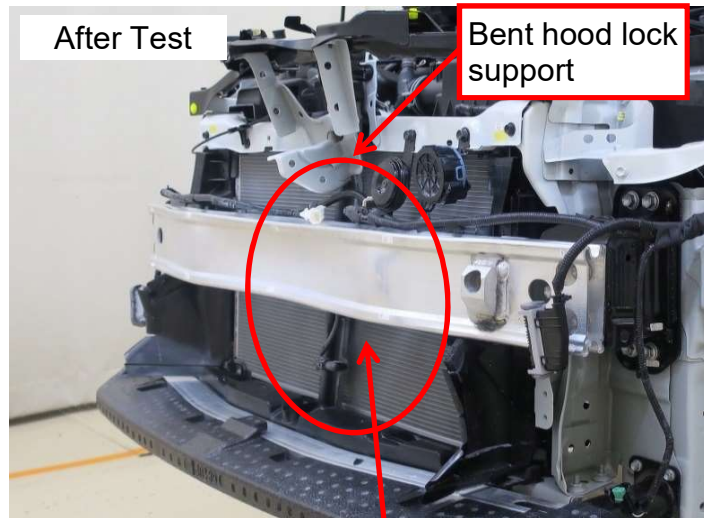

Before Test

Hood lock support

After Test

Bent hood lock support

Condenser was damaged.
